(54) Title: ELECTRICAL COMPONENTS AND CIRCUITS CONSTRUCTED AS TEXTILES

(57) Abstract: Electrical components are formed in a fabric during the weaving process by a series of crossing conductors in the warp and weft fibres of the fabric. Some of the crossing points provide permanent Separation of the crossing conductors, others permanent connection of the crossing conductors and others connection upon the application of pressure to the fabric. The struc-
ture provides the possibility of forming a greater range of components and more reliable component characteristics than heretofore possible.
